

CLAIMS

1. A solid cosmetic composition characterized by comprising, as a structure agent, a combination consisting of a saturated straight-chain polymer and an agglutinating agent for such polymer that consists of a glyceride.
5
2. A composition according to claim 1, characterized in that the saturated straight-chain polymer is saturated linear polyethylene.
3. A composition according to claim 2, characterized in that the saturated linear polyethylene has a molecular weight of approximately 400.
- 10 4. A composition according to any one of claims 1-3, characterized in that the agglutinant agent is tribehenin.
5. A composition according to any one of claims 1-4, characterized in that the saturated straight-chain polymer is present in a proportion ranging from 2 to 20% by weight, based on the total weight of the composition.
15
6. A composition according to any one of claims 1-5, characterized in that the agglutinant agent is present in a range from 3 to 15% by weight, based on the total weight of the composition.
7. A composition according to any one of claims 1-6, characterized in that it is in the form of a lipstick.
